Introduction

This Software Compatibility List (SCL) document describes the supported database and application agents for Veritas NetBackup 9.0 through 9.x

For all other NetBackup compatibility lists, refer to [<http://www.veritas.com/docs/000033647>](http://www.veritas.com/docs/000033647)

IPV6 and Dual Stack environments are supported from NetBackup 9.0 onwards with few limitations, refer technote for additional information [<http://www.veritas.com/docs/100041420>](http://www.veritas.com/docs/100041420)

Database and application patch support: Major versions of database software have been qualified in Veritas Labs and are listed in the tables below. NetBackup supports minor versions, service packs, and patches of database software unless otherwise noted, with the exception of Microsoft Exchange, Microsoft SharePoint and Microsoft SQL Server.

Linux support: For Linux distributions shown in the tables below, NetBackup is supported on all "editions" and on all vendor GA updates (n.1, n.2, etc.) or service packs (SP1, SP2, etc.) unless otherwise noted in this document or in the NetBackup OS Compatibility List, [<http://www.veritas.com/docs/100032808>](http://www.veritas.com/docs/100032808)

Database Appliances: 3rd party database hardware appliances are supported if the appliance OS/architecture and database software are listed in the Veritas NetBackup OS compatibility list [<http://www.veritas.com/docs/100032808>](http://www.veritas.com/docs/100032808) and in the Database and Application Agent compatibility list (this document). For example, some Oracle Exadata and Exalogic models are supported based upon this support statement. Please consult the vendor documentation to identify the embedded software versions.

End of life information: More information is available about certain NetBackup features, functionality, 3rd-party product integration, Veritas product integration, applications, databases, and OS platforms that Veritas intends to replace with newer and improved functionality, or in some cases, discontinue without replacement. Please see the SORT widget titled "NetBackup Future Platform and Feature Plans" at [<https://sort.veritas.com/netbackup.>](https://sort.veritas.com/netbackup.>)

Database Agents

The sections below contain information that is related to specific database agents and OS platforms.

SAP

The NetBackup SAP Agent protects SAP Oracle environments by integrating with SAP BR*Tools. SAP BR*Tools may have a separate version from the SAP Kernel. Reference Technical Solution 51094 for details <http://www.veritas.com/docs/000033132>.

SAP environments based on Microsoft SQL or DB2 databases are supported via the NetBackup Microsoft SQL and DB2 agents respectively.

SAP supports Oracle and MAX-DB base environments.

Apache Hadoop

The supported Hadoop Versions listed below refer to native Apache Software Foundation open source releases of the Apache Hadoop Project. NetBackup supports Hadoop file systems from Apache Hadoop, Cloudera and Hortonworks Distributions. Any modifications or derivations to these original distribution releases is not officially supported.

Note the following:

- NetBackup 9.0 does not capture Extended Attributes (xattrs) or Access Control Lists (ACLs) of an object during backup and hence these are not set on the restored files or folders.
- If the Access Control Lists (ACLs) are enabled and set on any of the files or directories that is backed up then, you have to explicitly set the ACLs on the restored data.
- The backup host can be a NetBackup 9.0 client or a 9.0 media server or a 9.0 master server. Hadoop Plugin needs to be installed on the NetBackup client or a media server or a master server to make it a Backup Host. Veritas recommends that you have media server as a backup host.
- NetBackup supports installation of the backup host in a virtual machine. The guest operating systems that NetBackup supports are same as the above.
- For a Hadoop cluster that uses Kerberos, Ensure that the Kerberos client (krb5_workstation package) is present on all the backup hosts with kdcserver details.
- NetBackup 8.1 does not support Hadoop cluster that uses Delegation token authentication
- Hadoop implementation on an Isilon clusters is not supported.
- For protection of HIVE data residing on Hadoop cluster. Refer: <https://www.veritas.com/support/en_US/article.100044318.html>
- SSL for Hadoop is supported with NetBackup 9.0 release. Please refer NetBackup Hadoop Admin guide for additional Information

Microsoft Exchange

It is the best practice of NetBackup Quality Engineering to test the latest service packs and updates for Exchange. For any Exchange service pack (SP) supported by NetBackup, each update rollup (RU) is also supported unless otherwise noted.

Exchange Granular Recovery For Exchange GRT operations, the OS of the granular proxy host must be a version of Windows that is supported for that version of Exchange.

- **Example:** For Exchange 2013, the OS of the granular proxy host must be Windows 2012, Windows 2012 R2, Windows 2016, Windows 2019.
- Please refer to the Database/Application vendor for specific Operating System requirements.
